

**Web Filter**      **Enterprise Threat Shield**      **E-mail Filter*****Comprehensive Internet Security for Continuous Productivity and Risk Control***

Your organization faces dire threats to its business integrity and productivity. Today's blended threats use sophisticated technologies and next-generation strategies to exploit insufficiently protected networks. Regulatory mandates such as Sarbanes-Oxley and HIPAA pose strict new requirements for data and network security-and threaten stiff fines for organizations that are unable to come into compliance. Streaming media, peer-to-peer networks, IM, and other distractions undermine employee productivity while opening additional risk vectors. Spyware, adware, and other malicious code impair performance and increase costs.

Effective protection demands more than piecemeal measures and point solutions. To maintain business integrity and compliance, reduce liability, improve employee productivity, and optimize IT resources, you need a complete, end-to-end strategy based on the industry's most comprehensive Internet protection solution.

**SurfControl Enterprise Protection Suite**

The SurfControl Enterprise Protection Suite provides continuous enterprise-wide protection against the full range of Internet threats, from viruses and phishing attacks to inappropriate use of system resources to regulatory non-compliance. Simple to deploy and manage, the suite and its components draw on best-of-breed technology, best practices, and close integration to seal off every threat vector in your organization. Perimeter, desktop-level, and mobile security ensure complete end-to-end protection at every point in your network-and beyond.

The SurfControl Enterprise Protection Suite deploys multi-layered threat protection to every point of vulnerability-Web, e-mail, IM, peer-to-peer, and mobile workstations-to deliver:

- Complete content visibility and compliance-with [SurfControl Web Filter](#), providing customized protection against both malicious content and inappropriate Web usage such as streaming media, file downloads, pornography, and copyright violations
- Bulletproof e-mail defense-with [SurfControl E-mail Filtering Solutions](#) that stop spam, viruses, phishing, and other Internet threats before they can damage your systems or impact your employees
- End-to-end security-with [SurfControl Enterprise Threat Shield](#), providing desktop-level protection against adware, spyware, and other malicious code that arrive via removable media, public LANs, and other out-of-network sources
- Centralized management-with simple to-use monitoring and reporting tools that give IT staff and executives full visibility into enterprise Internet, e-mail, and IM usage, making it easy to set and manage Internet policy.

All the elements of the SurfControl Enterprise Protection Suite are powered by SurfControl's [Adaptive Threat Intelligence Service](#)-drawing on [real-time threat detection](#) technologies and the industry's most accurate [dynamic threat databases](#) to provide continuous protection. Cross-pollination among the databases used by each product ensures that emerging threats are intercepted no matter how they try to enter your organization.
