# Content Databases

SurfControl's professional content team, located worldwide, provides reliable, culturally-based content selection of URLs, e-mail dictionaries, and spam content in 65 languages representing over 200 countries. SurfControl employs this content three ways:

URL Category List.
A database of more than 5 million relevant sites classified into 40 categories and 130 subcategories.

Anti-Spam Agent.
A powerful option that protects your organization from spam and junk mail. Anti-Spam Agent's unique digital signature filtering ensures 100% accuracy and manages spam by text and multiple file types, including JPEG's, MPEG's and others.

E-mail Dictionary.
User-customizable dictionaries pre-populated by our experts with keywords and phrases found in risk e-mail - covers 15 categories ranging from "adult" to "finance". It also supports Boolean language filtering.

SurfControl®
URL Category List

Our URL Category List is the premier database in the filtering industry. SurfControl has integrated its URL database with the content and technologies from filtering pioneers SurfWatch, CyberPatrol, and LittleBrother to provide the most accurate, current and relevant content filtering available.

40 Well-Organized Categories, 130 Subcategories - Our categories provide an extensive coverage of the most widely accessed sites on the Internet, and are organized into categories that are easy to manage.

5 Million Sites, Covering More Than 900 Million Web Pages - Content is sourced by 40+ team of professional researchers, state-of-the-art automated tools, and customer submissions.

International Content, 65 Languages, Over 200 Countries - Eight worldwide offices and a global research team give SurfControl the most international content in the industry. More than 65 languages, from sites registered in over 200 countries, are represented in the URL Category List.

Daily Updates - Customers receive daily updates to the URL Category List, representing more than 35,000 new sites a week. Plus, constant culling and aging makes this the most relevant and accurate filtering list you can buy.

SurfControl®
Anti-Spam Agent

Anti-Spam Agent is a powerful option that compares e-mails with a database of classified spam and junk mail content - letting you decide which e-mails to restrict or allow. It increases your protection against legal liabilities, wasted bandwidth, lost productivity, and wasted network resources.

The Anti-Spam Agent database is constantly updated with the electronic signatures of junk e-mail circulating on the Internet as identified by the SurfControl Global Content Team. It is the only e-mail-filtering database whose content is classified by type such as "Adult," "Hoax/Rumor," "Illegal Material," and "Chain Letter." Content is further classified by media type, such as text, graphics, and executable.

This gives you the ability to specify exactly how you want e-mail in each category to be handled - whether you want it delayed, isolated, deleted, or even allowed. Anti-Spam Agent scans both the e-mail and any attachments, including JPEGs, GIFs, and MPEGs.

Anti-Spam Agent's unique digital signature filtering ensures 100% accuracy and efficiency, reducing time and resources required to review false triggers, and provides scaling performance. The single click configuration also saves your time and resources.

Anti-Spam Agent database updates are provided daily by subscription, and SurfControl E-mail Filter does not have to be interrupted during the update process.

SurfControl®
E-mail Dictionary

SurfControl E-mail Filter comes equipped with 15 pre-populated dictionaries of content you may not want in your network. Definitions are classified by category such as "Adult," "Hate Speech," and "Finance." This gives you the ability to specify exactly how you want e-mail in each category to be handled - whether you want it delayed, isolated, deleted, or even allowed.

The extensive category dictionary coverage enables you to effectively limit your organizations':

legal liabilities • security breeches • lost productivity • wasted network resources • leakage of sensitive information

Each dictionary contains a list of category-specific words, and a suggested weighting for each. Each word and weighting is completely customizable. In addition, dictionary words can be configured using advanced Boolean lexical scanning. You can also add or delete words to create dictionaries that serve specific company needs - for example, to restrict e-mailing of confidential product plans except by key individuals.
