MailMarshal Exchange™ 5.3

CUSTOMERS - UPGRADING

MailMarshal Exchange customers with current maintenance agreements may upgrade to Mail-Marshal Exchange 5.3 at no additional charge.

If you are a MailMarshal Exchange customer and wish to upgrade to version 5.3, but do not have a current maintenance agreement, please contact your local Marshal representative.

The procedure for upgrading your MailMarshal Exchange server is documented in the Technical Support section of our website. If you have a current maintenance agreement and require assistance during your upgrade, please don't hesitate to contact your local Technical Support representative via our website – www.marshal.com.

If you have any suggestions or requests for our next version, we want to hear them. Simply email us at iwish@marshal.com.

Marshal is pleased to announce the release of MailMarshal Exchange 5.3. This newest release provides updated support for Microsoft Exchange Server 2007 as well as Windows Server 2008 and Windows Vista.

SUMMARY – WHAT'S NEW IN MAILMARSHAL EXCHANGE 5.3

• **Support for Microsoft Exchange Server 2007** – MailMarshal Exchange now supports Exchange 2007, so you can provide internal email filtering on the latest version of Exchange.

  *Customers running Microsoft Exchange 2000/2003 should continue to use MailMarshal Exchange 5.2

• **Near Zero Impact on Exchange Performance** – MailMarshal Exchange 5.3 makes almost no impact on Exchange message processing performance. This considerable advantage is thanks to 64-bit processing and an improved architecture for the MailMarshal Exchange Agent (the component which plugs into Exchange), allowing for seamless integration.

• **Support for Windows Server 2008 64-bit** – The MailMarshal Exchange agent can now be deployed on Microsoft Exchange 2007 running on the Windows Server 2008 64-bit platform (requires MailMarshal Exchange version 5.3.0 or later). You can also use the MailMarshal Exchange management Console, Configurator and Reports on Windows Server 2008 32-bit and 64-bit versions.

• **Support for Windows Server 2003 64-bit** – The MailMarshal Exchange agent can be deployed on Microsoft Exchange 2007 running on the Windows Server 2003 64-bit platform (requires MailMarshal Exchange version 5.3.1 or later). You can also use the MailMarshal Exchange management Console, Configurator and Reports on Windows Server 2003 32-bit and 64-bit versions.

• **Support for Windows Vista** – You can now use the MailMarshal Exchange management Console, Configurator and Reports on Windows Vista 32-bit and 64-bit operating systems.

MARSHAL™

Secure. Protect. Comply.

WHY SHOULD I UPGRADE TO MAILMARSHAL EXCHANGE 5.3?

MailMarshal Exchange 5.3 provides support for the latest Microsoft technologies including Exchange Server 2007, Windows Server 2008 and Windows Vista. If you want to upgrade to the latest Microsoft technologies, but have been waiting for MailMarshal Exchange to support them, now is the time.

Perhaps the greatest advantage of MailMarshal Exchange 5.3 is its reduced overhead on the Exchange Server. During internal testing by our Quality Assurance team, MailMarshal Exchange showed almost no impact on Exchange Server message throughput. In other words, Microsoft Exchange Server processes the same volume of email with MailMarshal Exchange running as without it, so you needn't worry about MailMarshal Exchange causing a detrimental impact on Exchange performance.

If you have a current MailMarshal Exchange maintenance agreement, you are automatically entitled to upgrade at no additional charge.
